"Agkistrodon piscivorus platelet aggregation inhibitor: a potent inhibitor of platelet activation.";

Proc. Natl. Acad. Sci. U.S.A. 86.8050-8054(1989).

-I- FUNCTION: Inhibits fibrinogen interaction with platelet receptors expressed on glycoprotein IIb-IIIa complex. Acts by binding to the glycoprotein IIb-IIIa receptor on the platelet surface and inhibits aggregation induced by ADP, thrombin, platelet-activating factor and collagen.

-I- SUBCELLULAR LOCATION: Secreted.

-I- TISSUE SPECIFICITY: Expressed by the venom gland.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        expressed on glycoprotein IIb-IIIa complex. Acts by binding to the glycoprotein IIb-IIIa complex. Acts by binding to the glycoprotein IIb-IIIa receptor on the platelet surface and inhibits aggregation induced by ADP, thrombin, platelet-activating factor and collagen.

"Platelet glycoprotein IIb-IIIa protein antagonists from snake venoms:
evidence for a family of platelet-aggregation inhibitors.";
Proc. Natl. Acad. Sci. U.S.A. 87:2471-2475[1990].
-i- FUNCTION: Inhibits fibrinogen interaction with platelet receptors
expressed on glycoprotein IIb-IIIa complex. Acts by binding to the
glycoprotein IIb-IIIa receptor on the platelet surface and
inhibits aggregation induced by ADP, thrombin, platelet-activating
factor and collagen.
-i- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SITE

The invention relates to a cDNA encoding Saxatilin protein derived from venom of Korean snake Agkistrodon saxatilis emelianov. The cDNA is useful for as an anti-tumour agent and for effectively suppressing platelet aggregation which makes it possible as and an active ingredient of anti-platelet agent. Saxatilin is useful for inhibiting angiogenesis induced

New cDNA encoding Saxatilin protein derived from venom of Korean snake Agkistrodon saxatilis emelianov, useful as anti-platelet aggregation agent and anti-tumor agent.

The present sequence is Agkistrodon saxatilis emelianov saxatilin protein. (Updated on 07-AUG-2003 to correct OS field.) (Updated on 29-AUG-2003 to standardise OS field)
                                                                                              Sequence 73
                                                                                                                                This peptide, designated Salmosin, inhibits blood platelet aggregation. It is derived from the venom of the Korean salmosa viper (Agkistrodon halys brevicaudus). Salmosin can be used, in particular, in compositions for management of thrombosis. Salmosin also has higher activity than kistrin, gamma-trigramin and echistatin. (Updated on 17-OCT-2003 to

                                              This sequence represents a 7.5 kD salmosin protein of a Korean snake, CC Agkistrodon halys brevicaudus. Salmosin is a disintegrin, a family of CC small proteins mainly derived from snake venom which contain an RGD or CC XGD motif (the structural motif recognised by platelet fibringen CC receptor alpha-2-b-beta-3). Disintegrins act as potent antagonists of CC several integrins including alpha-y-beta-3 and alpha-5-beta-1 integrins, CC the former being a marker of angiogenic blood vessels and certain CC malignant cells. Disintegrins inhibit tumour metastasis by blocking CC tumour cell adhesion to the extracellular matrix, and antagonism of CC integrin alpha-y-beta-3 can suppress tumour-induced angiogenesis.
CC Salmosin can be used as an anticancer agent. It may be used for the CC inhibition or reduction of tumour cell angiogenesis, the inhibition of metastatic tumour formation and the inhibition or reduction of metastatic cumour growth. Nucleotides encoding salmosin may be used in gene therapy CC applications. Many types of cancer may be treated with salmosin or CC nucleotides encoding it, including leukaemia and cancers of the breast, CC ovary, uterus, skin, lung, larynx, colon, pancreas, testis, liver, brain, CC muscle and bone.                                                                                                                                                                                                                                                              The invention relates to a cDNA encoding Saxatilin protein derived from venom of Korean snake Agkistrodon saxatilis emelianov. The cDNA is useful for as an anti-tumour agent and for effectively suppressing platelet aggregation which makes it possible as and an active ingredient of anti-platelet agent. Saxatilin is useful for inhibiting angiogenesis induced by tumour and for inhibiting tumour without cytotoxicity. The present sequence is Agkistrodon halys brevicaudus salmosin protein. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                               New cDNA encoding Saxatilin protein derived from venom of Korean snake Agkistrodon saxatilis emelianov, useful as anti-platelet aggregation agent and anti-tumor agent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence is deduced from the coding strand of a synthetic gene for a polypeptide inhibitor of platelet activation. The polypeptide is analogous to that obtd. from the venom of Agkistrodon p. piscivorus (North American Water Moccasin). The gene can be used to produce recombinant inhibitor or fusion proteins with eg. hirudin derivs. These can be used to decrease/ inhibit platelet aggregation and release in vivo or in vitro. Usual dose is 0.01-100 mg/kg body wt. The recombinant protein can also be used to coat the surfaces of invasive medical devices. It can also block stenosis and spasm at the site of thrombosis (by inhibiting the release of thrombosan A2). See also AAR06508. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Albumin fusion protein; therapeutic protein; immune disorder; autoimmune disorder; blood-related disorder; hyperproliferative disorder; renal disorder; cardiovascular disorder; respiratory disorder; neurological disorder; endocrine disorder; reproductive system disorder; gastrointestinal disorder; infectious disease; wound healing;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pure platelet activation inhibiting polypeptide from snake venom - for preventing agglutination and release in vivo or vitro, and new recombinant dna encoding it.

The present invention relates to albumin fusion proteins comprising a CC therapeutic protein and albumin (e.g. human serum albumin (HSA or HA)). CC The albumin fusion proteins are useful for treating, preventing, or CC ameliorating various disorders. Such disorders include immune disorders, cameliorating various disorders. Such disorders include immune disorders, cardiovascular disorders, immune disorders, cardiovascular disorders, reproductive CC disorders, renal disorders, cardiovascular disorders, reproductive cyclem disorders, reproductive system disorders, gastrointestinal disorders, infectious disease, and CC wound healing. Therapeutic proteins can be stabilised to extend shelf CC life and/or retain the protein's activity for extended periods of time in CC solution, in vivo or in vitro by genetically or chemically fusing the cyclein to albumin or its fragment or variant. In addition the use of CC albumin fusion proteins reduces the need to formulate protein solutions CC with large excesses of carrier proteins to prevent loss of therapeutic CC proliferation) of human albumin-human growth hormone (HA-HGH) fusion compared to no activity of unfused hGH. The present sequence represents the excension of compared to no activity of unfused hGH. The present sequence represents in the sequence is given in the sequence listing but is not mentioned elsewhere in the sequence listing but is not mentioned elsewhere in the sequence listing but is not mentioned elsewhere.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New albumin fusion proteins with extended shelf life, useful for treating leukemia, warts, hepatitis, multiple sclerosis and AIDS, comprises therapeutic protein fused to albumin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Page 336; 338pp; English.

It inhibits both fibrin binding to human platelets and fibrinogen- induced aggregation of human platelets. It is eliminated from the ciculation rapidly and is therefore useful in situations where a strong antithrombic action of short duration is neede, e.g. in surgery on peripheral arteries, in cardiovascular surgery and the interaction of platelets with artificial surfaces. See also AARO6389-97. (Updated on 25-MAR-2003 to correct PA

                                    The sequences given in AAR53933-46 are disintegrin peptides. Disintegrin are low molecular weight proteins from the Viperidae family of snakes which bind integrin proteins similar to the endogenous messenger and structurally interactive molecules. Disintegrins are competitive inhibitors of biomolecules, such as fibrinogen, for integrin binding sites such as G pib/IIIa on human platelets. Disintegrins contain the tripeptide sequence Arg-Gly-Asp. Radiolabelled disintegrin peptides can be used for the treatment and diagnosis of venous and arterial thrombi, pulmonary embodi and tumours or abscesses that have a thrombus component (Updated on 25-MAR-2003 to correct PN field.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                CC ontrast agent for diagnostic imaging or a target composition which CC comprises: (i) a lipid, protein or polymer and (ii) a gas, in combination CC with (iii) a targeting ligand (T1). The targets cells or receptors with (iii) a targeting ligand (T1). The targets cells or receptors composition of polymer and (iii) a gas, in combination CC with (iii) a targeting ligand (T1). The targets cells or receptors and CC the glycoprotein GPID/IIa receptor. Also claimed are: a composition comprising (i) - (iii) and an agreeous carrier; a composition stargeted vesicle composition comprising a fluorinated gas and a targeting CC ligand (T1') which targets tissues or receptors; a formulation for CC therapeutic or diagnostic use comprising (i) - (iii) and a bioactive agent; and a method for providing an image of an internal region of a patient, CC or for diagnosing the presence of diseased tissue, comprising; (a) composition of a composition as above; and (b) scanning the patient CC using ultrasound to obtain a visible image of the region or diseased tissue. The methods and compounds are useful for imaging or diagnosing the presence of diseased tissue, especially myocardial, endothelial or epithelial tissue but also gastrointestinal and cardiovascular regions. CC in particular the ligand targets regions of arteriosclerosis. Stabilised CC vesicles are particularly useful for perfusion imaging. The vesicles may CC also be used to deliver active agents to an intended target such as CC tissue or a receptor, and ultrasound can then be used to promote rupture of the vesicles and release a bioactive or diagnostic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                 The invention relates to a method of: (A) delivering a bioactive agent CC (BA) to a patient by: (a) administering a composition comprising: (i) an CC anionic lipid (AL); (ii) a cationic counter ion (CCI); (iii) a lipid (CC covalently bonded to a polymer (LDP), and (iv) BA, and (b) applying CC therapeutic ultrasound to facilitate delivery of BA in a desired region; CC (B) delivering a BA to a patient, comprising administering a composition (CC); a counter ion (CI), LDP, BA and (CC cargeting ligand (TL); (C) providing an image of an internal region of a gatient, comprising: (a) administering a composition comprising CL, CI CC and LDP of the composition in (B), and (b) scanning the patient using CC diagnostic imaging, to give visible images of the region, and (D) (CC) contrast agent comprising components as in (Ca). The compositions/processes described above may be used in drug delivery, therapeutic imaging and diagnostic imaging. This compense of a targeting ligand designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                           The present invention describes an ultrasound method comprising: (i) administering a targeted vesicle composition (A); and (ii) scanning the subject by exposure to a first type of ultrasound energy and then interrogating with a second type of ultrasound energy. (A) consists of a vesicle comprising a lipid, protein or polymer, encapsulating a gas, in combination with a targeting ligand. The method is used to detect: (I) a thrombus (particularly old or echogenic); (II) a low concentration of vesicles; or (III) vesicles targeted to endothelial tissue, particularly those containing integrins associated with malignancy or inflammation in early or small lesions, e.g. atheroselerotic plaque or ovarian, endometrial or other carcinomas. The method increases the signal from microbubbles and reduces background noise. The present sequence represents a targeting ligand peptide which is used in the method of the

                           This invention relates to a novel targeted compound having a combination of hydrophobic compound, hydrophilic polymer and targeting ligand. The cinvention also comprises a target vesicle composition comprising lipid, protein or polymer gas filled vesicles in an aqueous carrier, a method comprises a thrombus in a region of a patient involving administering to the patient a target vehicle composition and scanning the region (preferably cardiac region) with diagnostic imaging (preferably cardiac region) with diagnostic imaging (preferably composition and scanning the region of diagnostic ultrasound) and a method for lysing a thrombus in a blood vessel. The invention also comprises a method for providing an image of an internal region of a patient which can be used to obtain a visible image of a region (preferably arteriosclerosis, atherosclerotic plaque, infarcted myocardium or a cancer cell) and a method for diagnosing the presence of disease tissue in a patient involving administering a target vehicle composition and scanning the patient using ultrasound to obtain a visible image of the region. The methods of the invention may be used for imaging a thrombus in a region of a patient using ultrasound to obtain a visible image of the region. The methods of the invention may be used for the invention are easily synthesised and have diagnostic efficacy, over prior art methods. The present sequence represents a glycoprotein GPIIbIIIa receptor targeting ligand albolabrin used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           멼
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Target vesicle; diagnostic imaging; thrombus; cancer; albolabrin; arteriosclerosis; atherosclerotic plaque; infarcted myocardium; glycoprotein GPIIbIIIa receptor; targeting ligand.

                        palmitoylglycerophosphoethanolamine and phosphatidic acids. The method scanning involves exposing the pattent to a first ultrasound energy having a first insonation frequency to cause the vesicle to oscillate, and then subsequently, while the vesicle is oscillating, exposing the patient to a second ultrasound energy having a second insonation frequency that is different from the first insonation frequency, and detecting the reflected ultrasound signal. The method is useful for ultrasound diagnosis, for detection of a thrombus or enhancement of thrombus (e.g. old or echogenic thrombus) and for detecting vesicles
                                                                                                                                                                                                                                                                            The present invention relates to a novel ultrasound method which involves administering to a patient a targeted vesicle composition which comprises vesicles encapsulating agas, in combination with a targeting ligand, and scanning the patient using dual frequency ultrasound insonation. The vesicles themselves comprise a lipid, protein or polymer, and are selected from liposomes and micelles. The vesicles may comprise a phospholipid selected from diolecylphosphatidylcholine, dipalmitoylphosphatidylcholine, dipalmitoylphosphatidylcholine, dipalmitoylphosphatidylcholine, dipalmitoylphosphatidylcholine, dipalmitoylphosphatidylethanolamine, N-succipylphosphatidylcholine, dipalmitoylphosphatidylethanolamine, N-succipyldhosphatidylethanolamine, N-s

The cDNA is useful for as an anti-tumour agent and for effectively suppressing platelet aggregation which makes it possible as and an active ingredient of anti-platelet agent. Saxatilin is useful for inhibiting angrogenesis induced by tumour and for inhibiting tumour without cytotoxicity. The present sequence is Agkistrodon saxatilis emelianov saxatilin cDNA. (Updated on 07-AUG-2003 to correct OS field.) (Updated on 29-AUG-2003 to standardise
                                                    Lipoplex useful for inhibiting growth of cancer cells, and or preventing cancer, comprises a cationic liposome and an vector containing the saxatilin gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 06-MAR-2003

Also described is a method for inhibiting cancer growth by using a saxatilin gene, which comprises: (a) mixing cholesterol with DOTAP, suspending the mixture in aqueous medium to prepare cationic liposome, and introducing saxatilin gene to eukaryotic vector; (b) mixing the cationic liposome and expression vector in aqueous medium and homogenising to prepare lipoplex; and (c) introducing the lipoplex to a cancer tissue. Saxatilin is a disintegrin gene which has cytostatic activity and can be used in gene therapy. The lipoplex is useful for inhibiting growth of cancer cells, and for treating or preventing cancer. (Updated on 27-OCT-2003 to standardise OS field)
Polypeptide of specified aminoacid sequence - used for inhibiting platelet aggregation caused by e.g. collagen, thrombin, etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   family of small proteins mainly derived from snake venom which contain an CR RGD or RGD motif (the structural motif recognised by platelet fibrinogen receptor alpha-2-b-beta-3). Disintegrins act as gotent antagonists of several integrins including alpha-v-beta-3 and alpha-5-beta-1 integrins, the former being a marker of angiogenic blood vessels and certain malphant cells. Disintegrins inhibit tumour metastasis by blocking tumour cell adhesion to the extracellular matrix, and antagonism of integrin alpha-v-beta-3 can suppress tumour-induced angiogenesis.

CC integrin alpha-v-beta-3 can suppress tumour induced angiogenesis.

CC integrin alpha-v-beta-3 can suppress tempour induced angiogenesis.

CC integrin alpha-v-beta-3 can suppress tempour reduction of the inhibition or reduction of tumour cell angiogenesis, the inhibition or reduction of tumour cell angiogenesis, the inhibition of metastatic tumour growth. Nucleotides encoding salmosin may be used in gene therapy applications. Many types of cancer may be treated with salmosin or nucleotides encoding it, including leukaemia and cancers of the breast, ovary, uterus, skin, lung, laryxx, colon, pancreas, testis, liver, brain, muscle and bone.
